

“ The Ultimate In Outdoor Design”

“GO GREEN”

Water-Based / NO Acids or Harmful Chemicals

....is the choice when you want to Transform, Dull & Drab concrete into a Piece of Art!

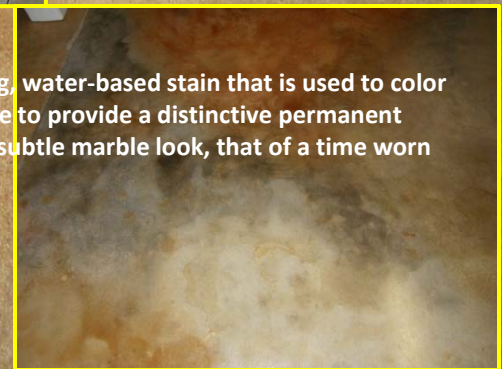

Envision a concrete color technique that reveals it's own unique look. Like art work, there are no two floors that are alike. A variegated, & natural look is the end result. There is no uniformity in the finished result. Each has it's own characteristics & beauty, they cannot be duplicated. That's the magic of staining process. An endless amount of results can be created.

Decorative cuts & patterns can also enhance the appearance of the stained surface.

Deeply penetrating, water-based stain that is used to color old & new concrete to provide a distinctive permanent mottled color & a subtle marble look, that of a time worn patina.

Provides a unique & custom look that cannot be duplicated. The color will not chip, crack or wear off, because the stain penetrates the concrete surface.
